**Oil/Air-
Cooling Systems**

AKG-Range
TL1 - TL6

**T e c h n i c a l
Specification**

Your innovative partner to design and supply engineered cooling packages

General

Our TL range is designed to help you find an individual solution for your cooling application. Our TL cooling systems offer a wide variety of products which have been fully tried and tested, even under arduous working conditions.

A range of six basic types covers almost all cooling applications, involving a large variety of fluids in stationary and mobile machines.

AKG and its representatives as experts in the field of cooling systems will be delighted to assist you.

As part of our ongoing technical improvements, AKG maintains the right to introduce modifications to the specifications in this brochure.

Features

- Cooling systems are made from Aluminium
- Fully tried and tested for arduous working conditions
- Ideal for mobile machines
- Maximum working pressure 14 bar
- Offering a high flexibility for usage in transmission, hydraulic, engine and lubrication oils
- Cooling systems can be fitted with 12/24V DC and 3 Phase motors

Benefits

- **Short lead times**
- **Cost effective**
- **Cooling systems fully equipped for immediate use**
- **Easy to install**
- **Spares from stock**
- **Maintenance free**

Applications

The units can be

used for cooling: mineral oil, synthetic oil, bio oil, HFA B C D liquids, water/glycol mixture, containing 50 % antifreeze and corrosion inhibitors

Function: Heat will be transferred from the fluid to the cooling air flow

Oil/Air-Cooling Systems

3 Phase motor: B14 small flange
Depending on the motor the current and power will vary.
For details see the name plate.

Materials

Cooler:	Aluminium
Fan blade:	Plastic
Fan shroud, finger guard:	Steel (Zinc plated), Painted/Powder coated

Easy sizing of TL-coolers

The following tables may be used to quickly select a TL-cooler.

The data is based on the assumption that oil inlet temperature does not exceed 70 °C for hydraulic and 110 °C for lubrication applications.

Please use the following heat rejection figures if no details are available:

- Agricultural and construction machinery: 1/3 of Diesel engine power
- Hydraulic pumps driven by an electric motor: 1/3 of electric motor power

Hydraulic applications

Heat rejection [kW @ 30 °C ambient temperature]											
Oil flow in l/min	TL1	TL2	TL3	TL4	TL5	TL6	TL2	TL3	TL4	TL5	TL6
Including shroud						Without shroud, fitted with 12/24V DC fan motor					
10	1.8

150						28.7					25.2

Specific heat rejection TL1 - TL6

InclS = Including shroud

WS = Without shroud

Pressure drop TL1 - TL6

The pressure drop curves are based on a viscosity of $30 \text{ mm}^2/\text{s} = 30 \text{ cSt}$.

Please use conversion factor f from page 11, to calculate pressure drop at other viscosity's.

Selecting a cooling system

To select a cooler for your application, the following data is required:

- **Heat rejection:** Alternative terminology is dissipation
- **Oil flow:** Circulating oil flow determines the cooler size
- **Oil inlet temperature:** Temperature of the oil entering the cooler
- **Cooling air flow temperature:** Air temperature at cooler face before entering matrix

1. Determination of input data

P_{req} [kW]	Heat rejection
V_{oil} [l/min]	Oil flow
T_{oil} [°C]	Oil inlet temperature
T_{caf} [°C]	Cooling air flow temperature

Example

P_{req} = 10 kW
V_{oil} = 50 l/min
T_{oil} = 70 °C
T_{caf} = 30 °C

2. Specific heat rejection

ETD [K] = T_{oil} - T_{caf} Entering Temperature Difference
P_{shr} [kW/K] = P_{req} / ETD required specific heat rejection

ETD [K] = T_{oil} - T_{caf} => 70 °C - 30 °C = 40 °C (= 40 K)
P_{shr} = P_{req} / ETD => 10 kW / 40 K = 0.25 kW/K

3. Select according to diagram

P_{shr}/ETD [kW/K] actual specific heat rejection
P = (P_{shr} / ETD) x ETD actual heat rejection

P_{shr} /ETD = 0.3 kW/K => TL6 WS
P = 0.3 kW/K x 40 K = 12 kW

4. Pressure drop / Oil temperature difference

Obtain pressure drop @30 cST oil viscosity from diagram on page 9. To calculate for other oil viscosities please use example on page 11.

$$\Delta T_{oil} [°C] = 33 \times P[kW] / V_{oil} [l/min]$$

$$\Delta T_{oil} = 33 \times (12 \text{ kW} / 50 \text{ l/min}) = 7.9 \text{ °C}$$

5. Results

**selected cooler TL6 WS: heat rejection 12 kW,
oil temperature difference 7.9 °C,
pressure drop 0.6 bar**

Conversion factors for different oil pressure drops

The pressure drop curves on pages 9 are based on a viscosity of $30 \text{ mm}^2/\text{s} = 30 \text{ cSt}$.

Please use conversion factor f to calculate pressure drop at other viscosities.

$\frac{\text{mm}^2}{\text{s}}, \text{ cSt}$	10	15	20	30	40	50	60	80	100
f	0.5	0.65	0.75	1.0	1.2	1.4	1.6	2.1	2.8

Example:

Pressure drop of type TL4 is 0.75 bar @90 l/min and $30 \text{ mm}^2/\text{s}$.

Assume an oil type ISO VG 46 is used @60 °C having a viscosity of $20 \text{ mm}^2/\text{s}$.

To calculate new pressure drop multiply 0.75 bar by $f = 0.75$ to obtain the actual pressure drop 0.6 bar approximately.

AKG – A STRONG GLOBALLY INTEGRATED GROUP OF COMPANIES

AKG is a globally leading supplier of high-performance coolers and heat exchangers as well as customised system solutions that comply with the highest quality standards.

Around the world 2,500 employees work at 11 manufacturing facilities located in Germany, France, Latvia, the USA, Brazil, China, Turkey and India. Together with a number of sales offices in additional countries and regions, AKG's cooling experts are on duty around the clock.

Longstanding partnerships with global OEM customers from 22 lines of business - including construction machinery, compressed air systems, agricultural and forestry machines, and many others - give fresh and innovative inspiration for AKG's line of pre-engineered cooling systems as well.

AKG operates one of the world's largest research, development, measurement and validation centres for cooling solutions and customized applications.

For 100 years, AKG's heat exchangers have stood for innovative solutions as well as the highest standard of engineering and manufacturing expertise.

Your AKG-Partner

AKG – A World Class Supplier
