

Cooling Experts around the Globe

Cooling Systems for Wind Power Onshore and Offshore

Quality Competence

It is a reassuring feeling to work with a strong and reputable partner like AKG, especially when the conditions are tough and unforgiving like in wind power generation. With a **100 year experience** in reliable cooling solutions we were also among the first to supply into wind turbines in the 1990s. Since then thousands of AKG products work in the field day in day out on all continents and the numbers are growing every day. Our quality level is the benchmark in our industry.

Engineered Solutions for a Perfect Application Fit

We understand our customers' needs in wind turbine cooling and their specific requirements and challenges. AKG's engineering and design teams are well trained and experienced to create cooling systems that are perfect solutions to our customers' cooling requirements and challenges. High reliability, low maintenance and corrosion protection are typical benefits of AKG cooling solutions, as our aluminum technology, including long-life alloys, has a proven performance in wind farms around the world. Each of our products is engineered, designed and manufactured to a custom specification. AKG uses the latest and highest quality simulation, calculation and CAD-tools and our production facilities are equipped and managed with the necessary flexibility to handle a great variety of products.

Standardized Components and Optimal Total Cost of Ownership

AKG's product portfolio for wind power applications derives from all the industries we are serving, ranging from light-weight aerospace coolers to massive mining excavator coolers and from safety heat exchangers for compressors to electronics cold plates. For wind power applications we can pick the right components and the best technology. We always look at the whole life cycle cost including maintenance to find the optimum. AKG's supply chain is as global as our production footprint aiming to source at best costs. In parallel we manage the diversification of our sourcing risks and play according to local content requirements.

AKG is leading the industry when it comes to developing new standards and platforms. Looking at development time and costs this is a considerable competitive advantage. Solutions built on the basis of standardized components are typically first-time-right and the most cost efficient.

Innovation and In-House Product Validation for a Speedy Time to Market

Time is of the essence when it comes to new product development and introduction. AKG has the resources and the attitude to move fast. We efficiently use the most up to date project and engineering tools and are able to provide prototypes with short lead time. In AKG's in-house Research and Development Centre all Wind Industry typical cooling system validation tests can be conducted. In addition we have a full database of references from more than two decades in the wind power industry.

Worldwide Presence

AKG is as global as our customers. We have engineering and production for wind power applications in Europe, Turkey, USA, India, China and Brazil. With the global presence, extensive logistics and supply chain network, AKG can deliver cooling solutions from any region, complying with national sourcing needs.

AKG as a Lifelong Partner

Be it large assemblies of small components or individual coolers in big or small series, AKG will cater for your needs. Our hallmark is superior reliability, high performance and easy maintenance for a full product life time. AKG's service business unit is even looking beyond: We supply the aftermarket, repair and service AKG's own as well as many other coolers.

WE HELP YOU ACHIEVE YOUR GOALS:

- Reliable, highly available power generation
- Larger and more efficient turbines
- Optimized electricity generation costs
- Smooth operation without disruption
- Localized production in growing markets
- Global products with local supply chain
- Standardized and modularized solutions

WE OFFER YOU:

- Robust, powerful, reliable cooling systems to protect key components from overheating
- Tailorized solutions for failure free operation and optimized Total Costs of Ownership
- Rapid product development and prototyping to reduce development time and costs
- Regional production in growth markets to meet local sourcing requirements
- AKG's high quality standards for validation, testing and serial production to reduce Life Cycle Costs
- Easy installation and low maintenance requirements to reduce installation costs and Life Cycle Costs
- Constant drive to innovate and develop next generation cooling solutions up to market readiness

AKG - The Supplier of Innovative High-Performance Cooling Systems for Wind Power Generation

Wind Turbine Individual Component Cooling for Converter and Gearbox	
Active cooling unit with fan	
Scope of supply: Heat exchanger, fan unit including motor and shroud, mounting frame plus auxiliary devices	
Active cooling unit key technical features: <ul style="list-style-type: none">High heat exchanger power density and long heat exchanger durability due to aluminium tube-fin or bar plate technologyIntelligent fan speed control with EC motor technology	
Benefits <ul style="list-style-type: none">Reduced cost of operation with intelligent control devices and high performance heat exchangers	

Cooling of Transmission Components	
High-performance liquid-to-liquid aluminum heat exchangers for cooling of transmission components	
Transmission cooler key technical features: <ul style="list-style-type: none">Aluminum heat exchangers in bar-plate design or one-shot brazed design for high durability or light weight applicationsCustomized solutions with high geometrical flexibilityCooler design verified by FEM / CFD calculations	
Benefits <ul style="list-style-type: none">Maximum design flexibility due to tailor-made cooling solutionsSuperior heat exchanger performance and validation processes based on in-house development and testing capabilities	

Transformer Fluid Cooling and Circulation	
Customized and fully integrated liquid-to-liquid safety heat exchanger module	
Scope of supply: Safety heat exchanger, pump for transformer fluid, mounting frame, piping, auxiliary devices	
Transformer Fluid Cooling key technical features: <ul style="list-style-type: none">Heat exchanger features safety passage with drainage to ensure 100% separation of the fluid circuitsModular cooler design with high flexibility in thermal and geometric sizing	
Benefits <ul style="list-style-type: none">Safe and cost-efficient transformer operation due to safety heat exchanger technology and power consumption optimized pump / heat exchanger designReady to install subassembly for easy mountability	

	Rooftop Passive Heat Exchanger Assembly
	Passive fluid-to-air heat exchanger
	Scope of supply: Heat exchanger panels, main frame, piping, auxiliary devices
	Cooling system key technical features: <ul style="list-style-type: none">Aluminum heat exchangers in bar-plate design or one-shot brazed design for high durability or light weight applicationsOffshore-ready with corrosion protection class up to C5M according to EN 12944 / requirementsCustomized solutions based on CFD-simulation optimized design
	Benefits <ul style="list-style-type: none">Maximum design flexibility due to tailor-made cooling solutions and modular system approachSuperior heat exchanger performance and validation processes based on in-house development and testing capabilities

	Cooling of Power Electronic Components (IGBT / Control Cabinet)
	Cold plates and air cooled heat sinks
	Cold plate key technical features: <ul style="list-style-type: none">Pressure-resistant and robust due to the brazed designAKG cold plates are designed to meet the highest thermal requirements while providing a low pressure dropCustomized solutions with high geometrical flexibility based on a design optimized by CFD-simulation
	Control cabinet cooler key technical features: <ul style="list-style-type: none">High production flexibility with glued and brazed production technologyTailor-made design to fit into existing installation space
	Benefits <ul style="list-style-type: none">Optimal cost / performance ratioMaximum flexibility und durability due to robust and fully customized design solutions

	Circulation and Distribution of the Main Cooling Circuits Fluid
	Tailor-made pump stations for different cooling circuit types and sizes
	Scope of supply: Pump, mounting plate, sensors (pressure, temperature), flow split device, heater, cut-off valves, control blocks and expansion vessels
	Pump unit key technical features: <ul style="list-style-type: none">Individual design with integrated measurement and heating devices to meet customers specific requirementsCanned motor pump configuration for maintenance-free pump operation
	Benefits <ul style="list-style-type: none">Reduced life cycle cost due to high durability, maintenance free operation and performance and optimized canned motor pump designFlexibility in design with different pump technologies and 100% customized solutions

AKG - A STRONG GLOBALLY INTEGRATED GROUP OF COMPANIES

AKG is a leading global supplier of high-performance coolers and heat exchangers, providing custom system solutions with the highest quality standards. Around the world 2,750 employees work at 11 manufacturing facilities located in Germany, France, Latvia, Turkey, the USA, Mexico, Brazil, China and India.

Together with a number of sales offices in additional countries and regions, AKG's cooling experts are on duty around the clock. Longstanding partnerships with global OEM customers from 24 lines of business - including construction machinery, compressed air systems, agricultural, forestry machines, wind power and many others - give fresh and innovative inspiration for AKG's line of pre-engineered cooling systems as well.

AKG operates one of the world's largest researches, development, measurement and validation centres for cooling solutions and customized applications. For 100 years, AKG's heat exchangers have stood for innovative solutions as well as the highest standard of engineering and manufacturing expertise.
